Services Overview

New Century Software provides a wide array of data conversion, data migration, data integration, asset mapping, and integrity management services to help manage your assets.

Professional services are at the core of the pipeline GIS solutions delivered by New Century Software. Over the years, our data capture and migration team has converted over 150,000 pipeline miles to a GIS-ready digital format. Our mapping team has worked with numerous clients on developing alignment sheet and area map templates that meet the needs of field technicians. The integrity management team has provided gas and liquid HCA identification, spill analysis, risk assessment, ILI alignment, and class location determination.

Pipeline operators who have partnered on projects with New Century Software have come to appreciate the investment we have made in our employees and processes. The services we offer include:

Class Location Analysis along gas pipelines to meet DOT regulations

Data Conversion to convert legacy data into a new database

Data Loading for transferring data into an existing GIS

Data Model Consulting to select a data model such as PODS or APDM that matches an organization's GIS strategy

Facility Spill Analysis to model overland spread in the event of a liquid spill

Field Services for gathering data along proposed, acquired, or existing routes

GIS Implementation to gather the organizational requirements and develop the architecture for an optimal GIS

HCA Analysis to identify high consequence areas along gas and liquid pipelines

Hosted Services for those who do not have the resources or desire for an in-house GIS

Integrity Management to meet a wide variety of DOT requirements specified in 49 CFR Parts 192 and 195

Map and Alignment Sheet Generation for rapid production of maps

Mapping Services for centerline routing, DEM overlays, house count determinations, and related projects

Risk Assessment to quantify relative or absolute risk and evaluate preventative and mitigative measures

Template Design to build custom alignment sheets and area map templates for use in SheetCutter

Training onsite or offsite to teach your team about our applications, database maintenance, data models, or other custom topics
