Mapping and Reporting

Alignment sheets and area maps provide critical information for the entire organization, but keeping them current is an ongoing effort. Our mapping applications aid with developing new maps and updating maps on existing assets. Web accessibility and automated server updates help keep the entire organization on the same page.

Summary

Providing operators the ability to quickly and easily generate alignment sheets from their pipeline data is one of New Century Software's major strengths. To support our clients with their mapping objectives, we offer an integrated suite of software and services that range from building pipeline alignment sheet templates to developing an enterprise level system of ensuring that maps are kept up-to-date for field personnel.

Services

Map and Alignment Sheet Generation for rapid production of maps

Mapping Services on projects like centerline routing, centerline adjustment, DEM overlays, and house count determinations to fully leverage a GIS

Template Design to build custom alignment sheets and area maps for use in SheetCutter

Training onsite or offsite to ensure your team is up to speed with our applications

Applications

SheetCutter easily generates complex alignment sheets and area maps. Currently in its sixth release, the SheetCutter application has set an industry benchmark when it comes to mapping software.

TemplateDesigner allows users to design customized alignment sheet templates in a powerful and intuitive interface.

SheetCutter Server automatically generates real-time alignment sheets by "listening" for data changes being made on the server.

Centerline Browser provides enterprise-wide internet access to pipeline data, maps, alignment sheets and reports.

Deep Sea Viewer manages ROV survey and video data in an offshore pipeline GIS
